

plasteel®

PREMIUM WHEEL WEIGHTS

**SMALL PARTS.
BIG INNOVATION.
DISTINGUISH
YOURSELF!**

+ UNIQUE IN THE WORLD

Plombco has developed the first-ever steel core wheel weight encased in a plastic shell. The valuable research and development of this patented product have made of this invention the Plombco's premium product. No other manufacturer in the world offers Plasteel®.

+ MEETS OEM STANDARDS

How to ascertain the true quality of a product? You make sure it meets car manufacturer's standards. Plasteel® has passed all OEM specific laboratory tests, and meets the car manufacturers quality standards. Tests ranging from rim retention to chemical resistance, the patented Plasteel® product line meets all of the requirements.

+ SCRATCHLESS & EASY APPLICATION

The plastic shell acts as a buffer between the hard steel core and the softer aluminum wheel. This allows Plasteel® weights to go on, and come off, the wheel with no damage. The plastic shell also acts as a vibration dampener allowing for easy application.

+ EXCEPTIONAL CORROSION RESISTANCE

Plasteel® has exceptional corrosion resistance. Underneath the rugged plastic shell, both the steel core and the clip have an OEM recommended coating for a protection that surpasses the most stringent industry standards.

+ BEST LEAD-FREE ALTERNATIVE

"As malleable as lead" is a comment we often hear from Plasteel® users. The plastic shell is much softer than steel, zinc or lead. The malleable plastic is what makes Plasteel® fit properly on a wide range of wheel sizes.

+ BEST RECYCLABILITY

Plasteel® is made of steel and plastic. The steel recycling process involves grinding the products, which will detach plastic from steel. The result is that both materials are recycled, without causing any damage to the environment.

+ PRECISE FIT & LOOKS GOOD

Plasteel® has a tight and precise fit against the wheel. There is no gap between the rim and the weight body which gives Plasteel® the look of a traditional lead weight.

+ ¼ OUNCE WITH REAL BODY

With Plasteel® there are no clip-only weights. Our ¼ ounce are easy to hold while installing, and removal is a snap. They will save you time and money.
